

To Whom It May Concern,

Yellowhead Road & Bridge Fort George is the Highway Maintenance Contractor for Service Area 19 (Prince George) and has heavily relied on Domcor Traffic Control routinely for well over a year now and have received great service from the onset of the relationship. Marco Myatovic and his crew have been accommodating, responsive, and eager to help foster a mutually beneficial relationship with our organization and have earned it every step of the way. They have gone out of their way to ensure that our main concern, our staff and their staff's safety on the road, is of utmost importance and they do not compromise on that value.

We have used Domcor Traffic Control for our routine works: culvert installs, surface upgrades and maintenance, large scope highway projects with high speed and traffic volumes, sign projects, equipment transportation, bridge installation and decommissioning, accident scene response, and many other miscellaneous activities in which they are always punctual and prepared. These are our core works, but mention must be given to a highly politicized incident that occurred earlier in the summer of 2020 in which one of our roads that was being surface treated with Chip Seal, failed. My first call upon controlling the scene was to Mr. Myatovic. Admittedly, I was unsure of the entire scope of our needs to contain this incident but, Domcor responded above and beyond providing: TCP's, Traffic Control Vehicles, pilot vehicles, and constant support of their supervisors. With their crucial 24 hour support for the duration, we overcame the incident which further reinforced our trust in the organization.

At YRB, we value community relationships and are proud to endorse Domcor Traffic Control as one we, and many others in the community rely upon.

If anyone reading this letter would like more information regarding Domcor, I would be happy to have further discussions. Please find my contact info below.

Regards,

George Merik
